

One of our ongoing Large Projects: making Resorts, Naturopathy Center, Ayurveda Hospital, Botanical Garden, College, School, Housing Estate, Farm House Estate and Destination Wedding Center combined in an almost 2.25 square kilometer of land area.

"I want to spent my old-age life in the lap of nature but with lifestyle facilities arranged for the ease of living and also among people, love to live their life as close with the nature as possible" said Mr. Shivam Barnawal, the owner of this land, and our client, at the time of making conversations over phone with Falguni, our Director regarding this project and surprisingly it was that crucial time when world was going through the darkest time of pandemic and we realized the importance of Yoga, Naturopathy and other health benefits in our life from nature.

The size of the project is around 2.25 sq.km of land area located near Vindiyachal, Uttar Pradesh. After buying this huge land Mr. Barnawal realized that there is a chance of scarcity of water at the summer time in this area, thereafter he prioritized the project of making a huge rain water reservoir to avoid insufficient water supply for numerous plantation work, large scale landscaping, and other needs. By turning a 2 acre area of low land into a huge manmade water body, he ensured the permanent water supply for this project.

"There has to be different themes for different areas of this site according to the purposes and types" said Indibar, our senior Designer while creating concept layouts according to the given information by our client.

Heart Chakra or Anahata Chakra was planned as a theme for the Naturopathy centers as, it is a symbol of unconditional love, joy, empathy, forgiveness etc, which leads to a free mind and a good health.

Concept of making the space in a pattern of "Swastik" dedicated for destination wedding was a perfect idea to relate the space with the native culture of wedding ceremony.

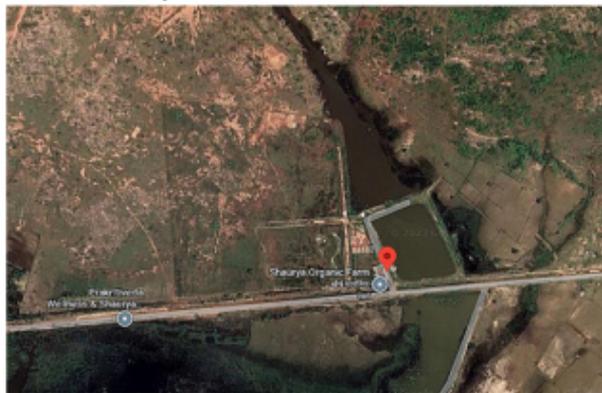

Beside these areas, other units like Resorts, Housing Estates, etc. have been planned with a road map connecting all the units together. This project is considered to be one of the largest projects related to nature care units in India.

"Impression of a tortoise in a water-body is planned specially for kids to play and learn in a different part of space filled with numerous species of plants and trees inside the botanical garden area" said Indibar, explaining the layout plan.

Peepal tree is considered to be a holy tree in Indian culture and that's why the concept plan for the resort is made with several Peepal trees planted inside the premises of the resort as shown in the layout and the shape of each yard dedicated for the bungalows are planned to be in the shape of the leaf of the Peepal tree.

High quality WBM has been considered to be used for the roads along with natural stones, bricks etc for additional walkways.

Ayurveda Hospital, Botanical Garden, College, School, Housing Estate, Farm House Estate and Destination Wedding Center combined in an almost 2.25 square kilometer of land area.

Left: The areal view of the project area from satellite image shown in the Google Earth application. The location balloon is pointed at the present water reservoir in between the water filled up lowland area of the project and the driveway made by the government.

The reservoir is clearly visible from the above and it is really a great initiative taken from our client to ensure the adequate water preservation for the summer time as the stagnant water in the lowland usually intend to dry up by evaporation due to high temperature or sucked by the surrounded land area.

Right: A view of the large water reservoir in the monsoon time, some part of the low land is visible along with the compaction aisle created for the construction of the roads in the project.

Left and below: Some cottages have been made for the guests. These cottages are equipped with standard lodging facilities with comfortable interior amenities.

Sustainable structures have been used for construction of the cottages. A minimalist look and feel have been given as these are temporarily made to facilitate visitors engaged in various parts of the execution and staying for a span of time at the site.

These cottages are equipped with standardized lodging facilities like king size beds, wardrobes, western type toilets, 24 x 7 water and electricity supply along with a live kitchen supplying meals and beverages.

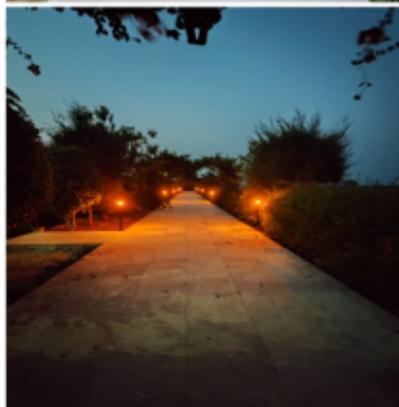

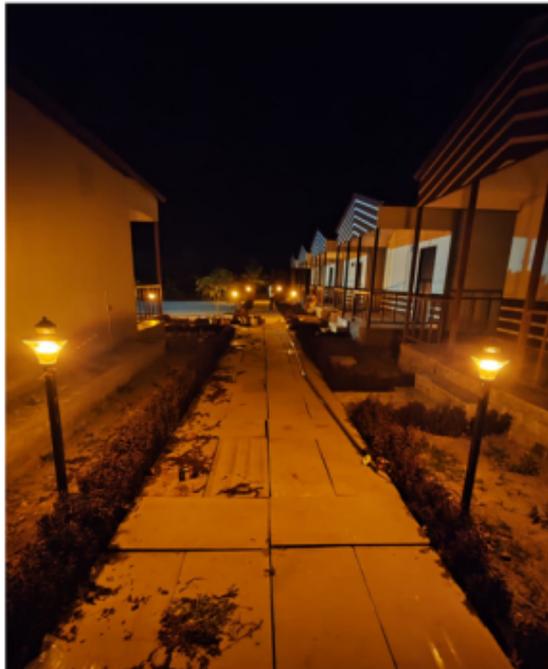

These are mainly made to ease the lodging for the visitors to make them headache free and fully concentrated into their works in this remote place.

Ayurveda Hospital, Botanical Garden, College, School, Housing Estate, Farm House Estate and Destination Wedding Center combined in an almost 2.25 square kilometer of land area.

Above: Here's a photo of the restaurant with multi cuisine platters for the guests and other visitors.

Below and right: A view of the walkway.

This is laterally a large project to be fully constructed by a calculated time limit and the teams engaged in executing the project are considered to be highly equipped for the job. It's really a matter of time for us to upload photos of the updated views of the site to show the making of this dream project step by step.

"By the grace of God, this will be a remarkable site for our concern to prove our creativity, capacity and expertise of making such an enormous project and we all are super excited to see it fully completed" said Falguni, standing at the site, observing the ongoing work in progress and the changing aesthetics of the place.
